**MY3 & SuicideSafe complement each other:**

SuicideSafe can help healthcare providers identify clients who are at risk for suicide. Once a client is identified as being at risk for suicide, providers can help the client download MY3 to set up a personalized safety plan, and identify individuals that the client would want to call in the event they begin to experience thoughts of suicide and introduce the National Suicide Prevention Lifeline to the client as a 24/7 resource. The clients can also email a copy of the safety plan to their provider directly through MY3.
